DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-28, drawn to a method for determining the semantic meaning of images by deriving a set of perceptual semantic categories to represent semantic cues in the human perception of images and forming a complete feature set (CFS), classified in class 382, subclass 159.
 - II. Claims 29-38, drawn to a method which process images in an image database by also determining the semantic meaning of images by deriving a set of perceptual semantic categories to represent semantic cues in the human perception of images and forming a complete feature set (CFS) and further determining CFS for each image and further classifying each image by a similarity metric, where the similarity metric operates such that all of a subset of Required Features of the semantic category must be present in the image, and at least one of a subset of Frequently Occurring features of the semantic category must be present in the image, classified in class 382, subclasses 160, 219, 228, and 305.
2. Inventions I, II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the broadest combination independent claims 1, 14 and 25 do not required the

specific recited in the broadest subcombination claim 29. The subcombination has separate utility such as determining CFS for each image and further classifying each image by a similarity metric, where the similarity metric operates such that all of a subset of Required Features of the semantic category must be present in the image, and at least one of a subset of Frequently Occurring features of the semantic category must be present in the image.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Brian Q. Le whose telephone number is 571-272-7424. The examiner can normally be reached on 8:30 A.M - 5:30 P.M.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Joseph Mancuso can be reached on 571-272-7695. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
